

Hardware based pivot function to enable high speed drawing in portrait orientation

The pivot function allows for a 90-degree rotation of the LCD panel into portrait orientation. Unlike other pivoting functions that are implemented using graphics cards and/or that require special software, TOTOKU's hardware pivot function is directly implemented in display hardware, and thus it is much faster with less noise.

Models supported : ME551i2, ME355i2, ME253i2, ME351i, CCL350i
